- .VC funds or seed funding
- .Private equity/debt funds

Classic or layered equity/debt funds with activation of revenues (carbon, PES, offsets...)

Green Bonds?

.Loans to Public Sector

- .Blending
- .Grants

How do layered funds work?

EIB is invested (and is still considering to invest) in such tranching funds [or facilities]:

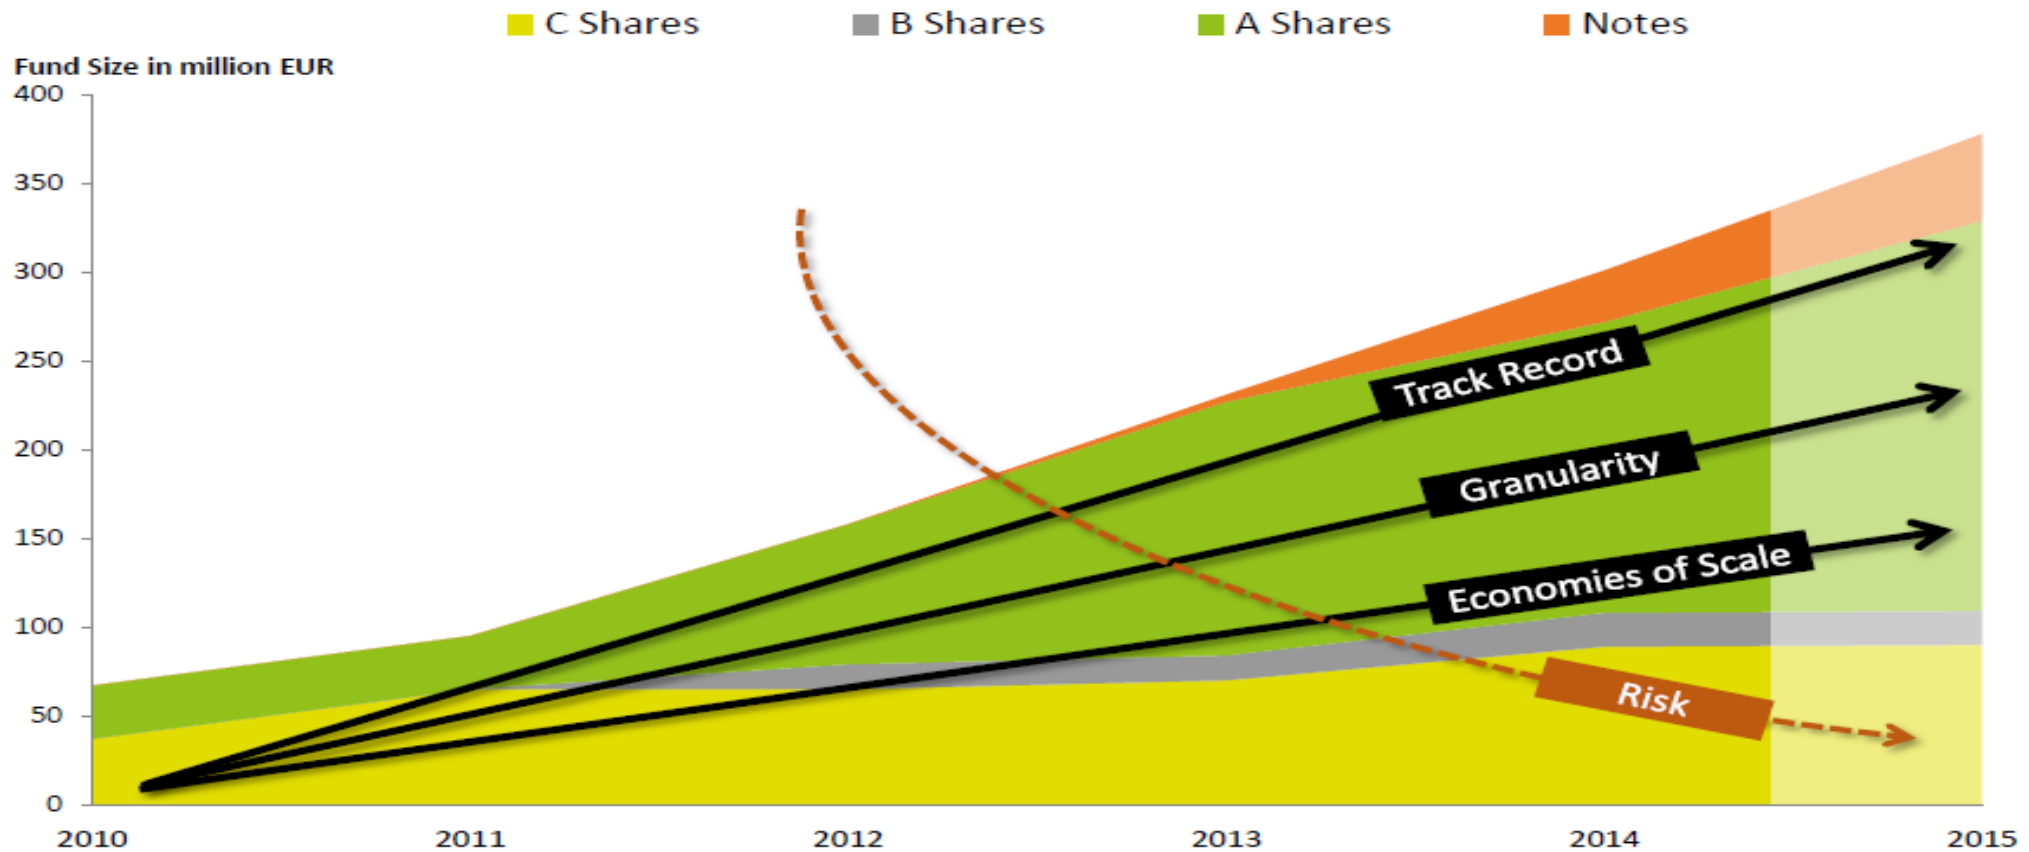

- Micro-Finance: EFSE (S-E Europe, Caucasus, Turkey)
- Renewable Energy & Energy Efficiency: Green for Growth (S-E Europe), EEEF (EU), GEEREF (worldwide)
- Natural Capital : NCFE (EU)

Example of Green for Growth Fund – Funding Evolution

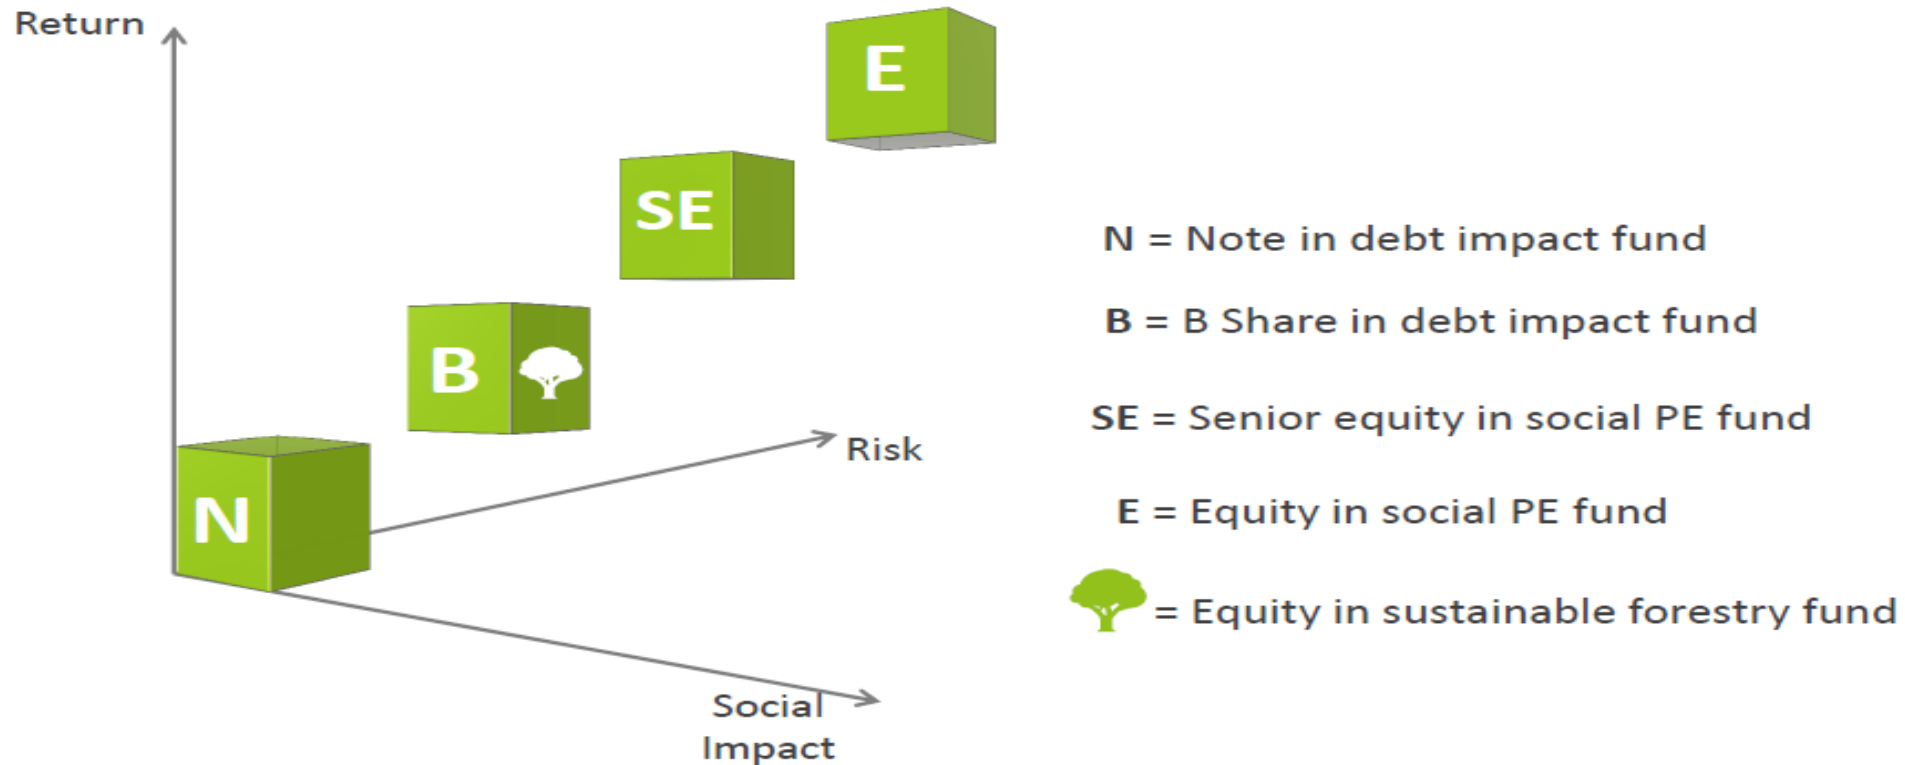

Tranched structures ideal for phasing in private investors over time

Why layered structures make sense in development space

Segregation into tranches allows each investor to optimize balance of results
